Department of Health Vaccination Plan

<https://doh.sd.gov/COVID/Vaccine/>

The screenshot displays the official website of the South Dakota Department of Health, specifically the COVID-19 Vaccination Plan page. The header features the department's logo, contact information for Kim Malsam-Rysdon, and social media links. A navigation bar includes links to various topics, with a breadcrumb trail showing the current path: HOME > COVID-19 > VACCINATION. On the left, a sidebar menu allows users to collapse or expand sections, with 'Vaccination' currently selected, showing sub-links for 'Healthcare Providers' and 'Public'. The main content area is titled 'COVID-19 VACCINE INFORMATION' and provides direct links to 'HEALTHCARE PROVIDERS' and 'PUBLIC' resources. It also lists key documents: 'South Dakota COVID-19 Vaccination Plan', 'COVID-19 Vaccination FAQs', and 'Benefits of Getting a COVID-19 Vaccine (CDC)'. A final link directs users to learn more about Operation Warp Speed from the U.S. Department of Defense.

Vaccination Plan Priority Groups—Phase 1

CleanSpace HALO Project

CLEANSPEACE HALO

A major innovation in Personal Respiratory Protection for Healthcare.

Designed by biomedical engineers. A lightweight compact powered respirator. Minimal parts. Ergonomic with no cables, hoses or helmets.

- Lightweight (350g/1 lb) and compact
- High protection for biohazards (APF 50 & 1000)
- No hoses or belt mounted battery packs
- Reliable, fast cleaning and disinfection
- CE Mark approved

Post Vaccine Considerations for Healthcare Personnel

(12/14/2020)

- Systemic signs and symptoms, such as fever, fatigue, headache, chills, myalgia, and arthralgia, can occur following COVID-19 vaccination.
- Most systemic post-vaccination signs and symptoms are mild to moderate in severity and occur within the first three days of vaccination.
- Vaccinated HCP should continue to follow all current infection prevention and control recommendations to protect themselves and others from SARS-CoV-2 infection.
- *Positive viral (nucleic acid or antigen) tests for SARS-CoV-2, if performed, should **not** be attributed to the COVID-19 vaccine, as **vaccination does not influence the results of these tests.***

Strategies are needed to effectively manage post-vaccination side effects and limit *unnecessary* work restrictions or unintentionally *allowing* a COVID+ HCP work while infected.

CDC provides [guidance](#) on how to evaluate an individual for post-vaccine side effects VS. + COVID infection. Considerations include:

- Date vaccination was given and onset/type of symptoms
- Exposure to someone + for COVID in the last 14 days
- COVID test results: Antigen or viral PCR (Vaccination does NOT influence COVID test results)

*Cough, shortness of breath, rhinorrhea, sore throat, or loss of taste or smell are **not consistent** with post-vaccination symptoms, and instead **may be symptoms of SARS-CoV-2 or another infection.***
